

THE MOST TRUSTED NAME IN TRUCK AND TRAILER AERODYNAMICS SINCE 1973.

How much will you save?

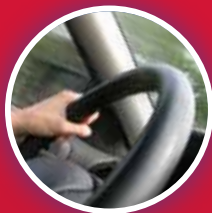

Estimate your savings in 25,000 mile increments

Three factors effect fuel economy most; weight, wind, and speed. How much will the Nose Cone save depends largely on how heavy the load, how strong the wind is blowing, and how fast the driver needs to go; since no two trucks will experience the same variations of those factors claiming a specific percentage to save can be difficult. In a vacuum the Nose Cone would always save 12% for medium duty and 20% for light duty trucks, but in the real world these factors combined with driver interaction reduce that potential and still saves!

- Save city and highway speeds
- Improve road handling
- Less strain on driver
- Less strain on the engine
- More money in your pocket!

Improve Productivity and Profitability with Aerodynamic Solutions for Straight Trucks from Nose Cone

**HAPPIER
DRIVERS**

Improve Vehicle Road Handling

Less strain on the engine, less strain on the driver.

Whether it's a passing truck, sudden gust of wind, or a constant crosswind, the wind has the power to change the trucks' direction requiring steering correction by the driver. Nose Cone is scientifically proven to maintain smooth flow no matter what direction the wind hits it. It diverts the wind to flow smoothly around the vehicle making it less susceptible to wind induced steering inputs. A truck with Nose Cone aerodynamics is a better truck to drive!

PAYBACK!**

Scientifically Proven Performance

Our claims are supported by science and experience.

Nose Cone is the most trusted name in truck and trailer aerodynamics and since 1973 we've lived up to our reputation by manufacturing scientifically sound products with the highest of standards. You can rely on Nose Cone to provide the most efficient and trouble free solutions to help manage your fuel budget. Our serialized to validate eligibility for warranty coverage and performance guarantee for the life of the vehicle.

**MAXIMUM
EFFICIENCY**

Maximize Vehicle Efficiency

In the city and on the highway.

Maximizing vehicle efficiency starts with knowing the difference between deflecting air and managing air. Deflecting the air away from the box will only save in headwinds. Nose Cone manages the air by turning it to flow smoothly around the front of the truck body. Only Nose Cone can do this in both headwinds and crosswinds, and only Nose Cone can reduce power demand up to 25% across the range of real-world conditions.

Without Nose Cone

With Nose Cone

Engine power moves the air. Nose Cone manages the air.
Trucks with Nose Cone save 3 to 5% in town and 7 to 10%
on the highway compared to trucks without Nose Cone.
